SKILLS

FRONTEND
React, Next.js, Angular, JavaScript (ES6+), TypeScript, HTML5, CSS3, Bootstrap, Responsive Design

BACKEND
Node.js, Express.js, Python, C#, ASP.NET Core, MVC, PHP, Laravel, REST API Development, JWT Authentication

DATABASES
MySQL, SQL Server, PostgreSQL, MongoDB, Oracle

TOOLS & PLATFORMS
Git & GitHub, Postman, Playwright MCP, Figma, BigCommerce, Shopify, WordPress, Agile/Scrum, VS Code, IIS, Render, Netlify, Vercel, AWS, Railway

PAYMENTS
Stripe, Flutterwave, PayPal, Paystack, Authorize.net, Braintree, Checkout.com, Monnify

UI/UX
Wireframing, Prototyping, User Interface Design, Design Systems

TESTING & QA
Troubleshooting & Debugging, Software Testing, QA Processes, Web Application Knowledge, Test Case Creation, Bug Reporting, API Expertise

AI TOOLS
OpenAI, Claude, Blackbox AI, ChatGPT, Uizard, Galileo AI

EDUCATION

B.Sc Computer Science
National Open University of Nigeria (NOUN)

INTERESTS

Problem Solving UI/UX Design Continuous Learning
Open Source Tech Mentoring

PROFILE

Software Engineer with experience building responsive web applications using React, Node.js, Python, and C#. Skilled in developing REST APIs, integrating authentication and multi-gateway payment systems (Stripe, Flutterwave, PayPal, Paystack, Authorize.net, Braintree, Checkout.com, Monnify), and translating business requirements into scalable digital solutions. Passionate about writing clean code, solving complex problems, and collaborating with cross-functional teams to deliver user-focused products. Adept at UI/UX design principles and committed to continuous professional growth.

PROFESSIONAL EXPERIENCE

- **QA Engineer (Voluntary)**
RolePilot (Startup)

1.5 Years

- QA Engineer expert specializing in software testing and quality assurance across web applications
 - Used Postman for API testing, Playwright MCP for automated browser testing, and Jira for bug tracking and agile project management
 - Documented bugs in Google Docs — for hosted applications, screenshots each location where bugs occurred, imported them into the doc, and explained what happened and what could be done to fix it
 - Created and executed test cases, documented results, and reported bugs with clear reproduction steps
 - Performed regression, functional, and API testing to ensure reliability before releases
 - Collaborated with developers to resolve defects and uphold quality standards throughout the development lifecycle
- **Software Engineer & QA (Contract)**
Heimdall1791 Technology (American Startup, Remote, US-based)

2022 – 2024

- Built and maintained responsive single-page applications using React, delivering intuitive user interfaces for client-facing platforms
 - Built RESTful APIs with C# and ASP.NET Core for a payment-integrated platform backend, handling transaction workflows and third-party integrations
 - Developed Node.js and Express REST APIs for a separate client-facing application, supporting frontend data needs and external service integrations
 - Integrated idempotent payment processing using idempotency keys to prevent duplicate charges and ensure exactly-once transaction handling across network retries
 - Collaborated with a distributed team of developers and designers, delivering features through Agile sprints with regular code reviews and pair programming sessions
 - Worked as a QA Engineer for 2 years alongside application development — creating test cases, performing manual and API testing, reporting bugs, and ensuring software quality across releases
 - Optimized MySQL database queries, reducing data retrieval times and enhancing application performance
 - Designed and implemented admin dashboards with real-time data visualizations for business monitoring
- **Software Engineer**
Sysbeams, Abeokuta — (Remote)

2025 (Oct - Dec)

- Developed a full-featured e-commerce frontend in React with complete payment flow and cart management
 - Built user authentication and authorization systems using JWT and ASP.NET Core
 - Designed responsive dashboards for user management, order tracking, and analytics
 - Implemented backend microservices with C# and .NET Core, improving system modularity
 - Collaborated with cross-functional teams to gather requirements and deliver features on schedule
- **Coding Instructor**
Code Learners Hub, Abeokuta (Part-time)

2025 – Present

- Teach HTML, CSS, JavaScript, Python, React, and C# to aspiring developers through structured coursework
 - Design and update course materials to reflect current industry practices and modern tooling
 - Mentor students on real-world projects, providing code reviews and technical guidance
- **Mathematics Teacher**
Muslims Teens Private School (Full-time)

2021 – 2024

- Delivered mathematics instruction to secondary school students using modern STEM teaching methods
 - Developed lesson plans and assessment materials tailored to diverse learning needs
- **Backend Developer Intern**
Trueminds Innovation (Remote) — 97% Grade

2026 (3 months)

- Worked within a team of interns on grouped projects, yet achieved 97% overall — the highest grade among all peers in the internship cohort
 - Integrated LLM-powered AI chat features enabling natural language user communication
 - Built end-to-end messaging system for seamless real-time user interaction
 - Developed and optimized API endpoints for AI services and message handling
- **Freelance Fullstack Developer**
300 Arundel Learning Limited, Lagos — School Management Portal

2026 (1.5 months)

- Built a full-stack school management system (React + .NET) for a private school in Lagos, Nigeria, digitizing the entire academic lifecycle
 - Student management — Registration, class assignment, ID card generation, CSV export with paginated student lists
 - Exams & assessments — Exam creation, question banks (with DOCX upload), automated grading, theory marking, result computation, report cards
 - Promotions & academic tracking — Term-to-term promotion with configurable criteria, cumulative result calculation, position ranking
 - Entrance exams — Full candidate lifecycle from registration to auto-graded entrance testing with token-based access links
 - Comments engine — Teacher remarks and headmaster comments with batch management and default seeding
 - Notifications — Parent notification system via the Information module
 - Role-based dashboards — Admin, Teacher, Student, and Parent portals with granular access control
 - System Settings — Admin panel for global configuration including geofencing toggles, coordinates, and radius
 - Implemented GPS-based geofencing for the exam system, using real-time location verification via the Haversine formula to restrict exam access to within the school premises — configurable through an admin settings panel
- **Self-built Payment Platform**
BillXpress — Bill Payment Platform

2025 (2 months)

- My first self-built payment platform — a full-stack bill payment system with wallet funding via Paystack
 - Users can fund their wallet and purchase airtime, data, cable TV, electricity, betting, and education fees from a single balance
 - Implemented the complete Paystack payment lifecycle: initialize → verify → webhook confirmation with signature validation and automatic wallet credit on success
 - Implemented complete authentication flow with MFA, session management, CSRF protection, and account lockout
 - Built admin dashboard with Recharts analytics, user management, and transaction oversight
 - Still actively developing toward live payment production — all transactions currently run in test mode while working on real payment gateway integration
- **Fullstack Developer**
E-Commerce Web Application — Fullstack Online Store

2025 (3 months)

- Built a full-featured online store with product catalog, search, shopping cart, and PayPal payment processing with webhook-based payment verification and automatic order confirmation
 - Implemented real-time order tracking with WebSocket notifications keeping customers informed of every status change from placement to delivery
